(1) Monthly prices are collected and processed three times per annum. With the release of the most current four-months indexes, indexes for the previous four-month span are revised and finalized. — Des prix mensuels sont relevés et calculés trois fois par année. Avec l'émission des indices les plus récents portant sur quatre mois, les indices pour la période de quatre mois précédents sont révisés et finalisés.

EXPLANATION OF METHODS USED AND ADDITIONAL
SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971=100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction data for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes: Manufacturing, 1956-1976, Catalogue 62-543 for the 1971=100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES
SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971=100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueilli des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: Industries manufacturières, 1956-1976, n° 62-543 au catalogue pour les indices basés sur l'année repère 1971=100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix

by oil companies for finely specified categories of sale. A listing of the components of the old and revised price samples is given in text table 1.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user category in the Petroleum Refinery Index (PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P_{t/71}^{Pub.} = P_{t/Jan. 77}^{New} \times P_{Jan. 77/71}^{Old}$$

where

$P_{t/71}^{Pub.}$ is the published index for a period subsequent to January 1977 which has been derived from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P_{t/Jan. 77}^{New}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P_{Jan. 77/71}^{Old}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Thermal Coal Purchase Price Index (1971=100)

This index on a 1971=100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index

nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus. Les composantes de l'ancien échantillon et de l'échantillon révisé des prix figurent dans le texte tableau 1.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$p_{t/71}^{publ.} = p_{t/janv. 77}^{nouv.} \times p_{janv. 77/71}^{anc.}$$

où

$p_{t/71}^{publ.}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation des prix mesurée à partir du nouvel échantillon;

$p_{t/janv. 77}^{nouv.}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$p_{janv. 77/71}^{anc.}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice du prix d'achat du charbon thermique (1971=100)

Cet indice de base 1971=100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat

determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, excluding federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspeyres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

\sum is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the fixed weight of a particular item in the base year o,

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index

payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, sans les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'"indice du prix d'achat du charbon thermique" est établi à l'aide de l'équation modifiée de Laspeyres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

\sum est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération fixe d'un article particulier pendant l'année de base o,

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend

is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971=100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) an index for bills less than 5 000 kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$Pt/o = \frac{\sum \frac{Pt}{Po} \times Vo}{\sum Vo} \times 100$$

Pt/o = index for year t

Pt = price of an item in the given period

Po = price of an item in year o, the base year

Vo = weight of an item in the base period

Pt/Po = price ratio for a particular item.

comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence qui doit paraître bientôt (n° 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971=100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie garantie, non susceptible d'être interrompue fait l'objet du relevé, les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité du produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$Pt/o = \frac{\sum \frac{Pt}{Po} \times Vo}{\sum Vo} \times 100$$

Pt/o = indice pour l'année "t"

Pt = prix d'un article particulier pendant une période donnée

Po = prix d'un article particulier pendant l'année "o", année de base

Vo = coefficient de pondération d'un article pendant la période de base

Pt/Po = ratio des prix pour un article particulier.

Methodology

Bills less than 5 000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5 000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW and over 20 000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5 000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15 000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Méthodologie

Factures de moins de 5 000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5 000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonnage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquêté) pour chaque intervalle ou strate, par ex., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW et plus de 20 000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5 000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinemment que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15 000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Note

This and other government publications may be purchased from local authorized agents and other community bookstores or by mail order.

Mail orders should be sent to Publications Distribution, Statistics Canada, Ottawa, K1A 0T6, or to Publishing Centre, Supply and Services Canada, Ottawa, K1A 0S9.

Inquiries about this publication should be addressed to:

Goods and Services Producing Industries
Section,
Prices Division,

Statistics Canada, Ottawa, K1A 0V5 (telephone: (613)995-5738 for indexes; (613)995-5764 for technical information), or to a local office of the bureau's User Advisory Services Division:

St. John's (Nfld.)	(726-0713)
Halifax	(426-5331)
Montréal	(283-5725)
Ottawa	(992-4734)
Toronto	(966-6586)
Winnipeg	(949-4020)
Regina	(569-5405)
Edmonton	(425-5052)
Vancouver	(666-3695)

Toll-free access to the regional statistical information service is provided in Nova Scotia, New Brunswick, and Prince Edward Island by telephoning 1-800-565-7192. Throughout Saskatchewan, the Regina office can be reached by dialing 1-800-667-3524, and throughout Alberta, the Edmonton office can be reached by dialing 1-800-222-6400.

Nota

On peut se procurer cette publication, ainsi que toutes les publications du gouvernement du Canada, auprès des agents autorisés locaux, dans les librairies ordinaires ou par la poste.

Les commandes par la poste devront parvenir à Distribution des publications, Statistique Canada, Ottawa, K1A 0T6, ou à Imprimerie et édition, Approvisionnements et services Canada, Ottawa, K1A 0S9.

Toutes demandes de renseignements sur la présente publication doivent être adressées à:

Section des industries de biens et de services,
Division des prix,

Statistique Canada, Ottawa, K1A 0V5 (téléphone: (613)995-5738 indices; (613)995-5764 renseignements techniques), ou à un bureau local de la Division de l'assistance-utilisateurs situé aux endroits suivants:

St. John's (T.-N.)	(726-0713)
Halifax	(426-5331)
Montréal	(283-5725)
Ottawa	(992-4734)
Toronto	(966-6586)
Winnipeg	(949-4020)
Regina	(569-5405)
Edmonton	(425-5052)
Vancouver	(666-3695)

On peut obtenir une communication gratuite avec le service régional d'information statistique de la Nouvelle-Écosse, du Nouveau-Brunswick et de l'Île-du-Prince-Édouard en composant 1-800-565-7192. En Saskatchewan, on peut communiquer avec le bureau régional de Regina en composant 1-800-667-3524, et en Alberta, avec le bureau d'Edmonton au numéro 1-800-222-6400.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- ^p preliminary figures.
- ^r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE

CANSIM[®] (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

Table 1 (i.e., Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities) includes the identification codes required to order series from CANSIM. For example, to obtain the Industry Selling Price Index: Manufacturing, the code used is D 500000.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0Z8 or call (613) 995-7406.

[®] Registered Trade Mark of Statistics Canada.

Revisions

Price indexes in this publication are subject to revision for the most recent six months shown except for Electric Power Selling Price Indexes which have a four months revision period. Any revisions beyond these limits are so indicated.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombre indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes
- ^p nombres provisoires.
- ^r nombres rectifiés.
- x confidentiels en vertu des dispositions de la Loi sur la Statistique relatives au secret.

NOTA

Le CANSIM[®] (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Le tableau 1 (Indice des prix de vente dans l'industrie par groupes, industries et par certains produits) contient les numéros d'identification qui servent à l'extraction des données de CANSIM. Par exemple, pour obtenir l'Indice de prix de vente dans l'industrie: industries manufacturières, le numéros d'identification est D 500000.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0Z8, ou téléphonez à (613) 995-7406.

[®] Marque déposée de Statistique Canada.

Révisions

Les indices de prix contenus dans le présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Font exception les indices des prix de vente de l'énergie électrique qui sont sujets à révision pendant quatre mois. Toute révision portant sur une plus longue période est indiquée.

- (1) Indexes for the most recent six months shown are subject to revision. - Les indices figurant pour les six mois les plus récents sont sujets à révision.
(2) Gross weighted, including inter-industry shipments. For explanation see page 71. - Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 71.
(3) The Industry Selling Price Index for Manufacturing contains estimates of the movements of petroleum prices for the months for which the Petroleum and Coal Products Industries index (D544000, major group 18) is not available. - L'indice des prix de vente dans l'industrie manufacturière englobe les variations estimatives des prix des produits pétroliers les mois où l'indice de la fabrication de produits du pétrole et du charbon (D544000, groupe 18) n'est pas disponible.
(4) Only British Columbia prices for both rough and planed hemlock are included. - Seuls les prix de Colombie-Britannique du pruche à l'état brut et plané sont inclus.

(1) Monthly prices are collected and processed three times per annum. With the release of the most current four-months indexes, indexes for the previous four-month span are revised and finalized. - Des prix mensuels sont relevés et calculés trois fois par année. Avec l'émission des indices les plus récents portant sur quatre mois, les indices pour la période de quatre mois précédents sont révisés et finalisés.

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971=100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction data for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes: Manufacturing, 1956-1976, Catalogue 62-543 for the 1971=100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971=100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueilli des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: Industries manufacturières, 1956-1976, n° 62-543 au catalogue pour les indices basés sur l'année repère 1971=100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix

by oil companies for finely specified categories of sale. A listing of the components of the old and revised price samples is given in text table 1.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user category in the Petroleum Refinery Index (PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P_{t/71}^{\text{Pub.}} = P_{t/\text{Jan. } 77}^{\text{New}} \times P_{\text{Jan. } 77/71}^{\text{Old}}$$

where

$P_{t/71}^{\text{Pub}}$ is the published index for a period subsequent to January 1977 which has been derived from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P_{t/\text{Jan. } 77}^{\text{New}}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P_{\text{Jan. } 77/71}^{\text{Old}}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Thermal Coal Purchase Price Index (1971=100)

This index on a 1971=100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index

nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus. Les composantes de l'ancien échantillon et de l'échantillon révisé des prix figurent dans le texte tableau 1.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$P_{t/71}^{\text{publ.}} = P_{t/\text{janv. } 77}^{\text{nouv.}} \times P_{\text{janv. } 77/71}^{\text{anc.}}$$

où

$P_{t/71}^{\text{publ.}}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation des prix mesurée à partir du nouvel échantillon;

$P_{t/\text{janv. } 77}^{\text{nouv.}}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$P_{\text{janv. } 77/71}^{\text{anc.}}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice du prix d'achat du charbon thermique (1971=100)

Cet indice de base 1971=100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat

determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, excluding federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspeyres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

\sum is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the fixed weight of a particular item in the base year o,

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index

payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, sans les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'"indice du prix d'achat du charbon thermique" est établi à l'aide de l'équation modifiée de Laspeyres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

\sum est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération fixe d'un article particulier pendant l'année de base o,

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend

is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971=100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) an index for bills less than 5 000 kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$Pt/_{o} = \frac{\sum \frac{Pt}{Po} \times Vo}{\sum Vo} \times 100$$

$Pt/_{o}$ = index for year t

Pt = price of an item in the given period

Po = price of an item in year o, the base year

Vo = weight of an item in the base period

Pt/Po = price ratio for a particular item.

comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence qui doit paraître bientôt (n° 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971=100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie garantie, non susceptible d'être interrompue fait l'objet du relevé, les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité du produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$Pt/_{o} = \frac{\sum \frac{Pt}{Po} \times Vo}{\sum Vo} \times 100$$

$Pt/_{o}$ = indice pour l'année "t"

Pt = prix d'un article particulier pendant une période donnée

Po = prix d'un article particulier pendant l'année "o", année de base

Vo = coefficient de pondération d'un article pendant la période de base

Pt/Po = ratio des prix pour un article particulier.

Methodology

Bills less than 5 000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5 000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW and over 20 000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5 000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15 000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Méthodologie

Factures de moins de 5 000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5 000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonnage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquête) pour chaque intervalle ou strate, par ex., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW et plus de 20 000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5 000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinemment que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15 000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distortions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
- ^P preliminary figures.
- ^r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE

CANSIM[®] (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

Table 1 (i.e., Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities) includes the identification codes required to order series from CANSIM. For example, to obtain the Industry Selling Price Index: Manufacturing, the code used is D 500000.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0Z8 or call (613) 995-7406.

[®] Registered Trade Mark of Statistics Canada.

Revisions

Price indexes in this publication are subject to revision for the most recent six months shown except for Electric Power Selling Price Indexes which have a four months revision period. Any revisions beyond these limits are so indicated.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombre indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes
- ^P nombres provisoires.
- ^r nombres rectifiés.
- x confidentiels en vertu des dispositions de la Loi sur la Statistique relatives au secret.

NOTA

Le CANSIM[®] (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Le tableau 1 (Indice des prix de vente dans l'industrie par groupes, industries et par certains produits) contient les numéros d'identification qui servent à l'extraction des données de CANSIM. Par exemple, pour obtenir l'Indice de prix de vente dans l'industrie: industries manufacturières, le numéros d'identification est D 500000.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0Z8, ou téléphonez à (613) 995-7406.

Révisions

Les indices de prix contenus dans le présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Font exception les indices des prix de vente de l'énergie électrique qui sont sujets à révision pendant quatre mois. Toute révision portant sur une plus longue période est indiquée.

TABLE OF CONTENTS

Chart	iv
<u>Table</u>	
1. Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities (1971=100)	2
Major Group	
1. Food and Beverage Industries	2
2. Tobacco Products Industries	16
3. Rubber and Plastics Products Industries	16
4. Leather Industries	19
5. Textile Industries	21
6. Knitting Mills	24
7. Clothing Industries	26
8. Wood Industries	27
9. Furniture and Fixture Industries	32
10. Paper and Allied Industries	33
12. Primary Metal Industries	39
13. Metal Fabricating Industries (Except Machinery and Transportation Equipment Industries)	42
14. Machinery Industries (Except Electrical Machinery)	44
15. Transportation Equipment Industries	46
16. Electrical Products Industries	48
17. Non-metallic Mineral Products Industries	52
18. Petroleum and Coal Products Industries	55
19. Chemical and Chemical Products Industries	57
20. Miscellaneous Manufacturing Industries	61
2. Purchase Price Indexes of Industrial Materials:	
Secondary Metals (1971=100)	66
Thermal Coal Index (1971=100)	68
3. Electric Power Selling Price Indexes (Non-residential) (1971=100)	69
Explanation of Methods Used and Additional Sources for Industrial Price Indexes	71

TABLE DES MATIÈRES

	Page
Graphique	iv
<u>Tableau</u>	
1. Indices des prix de vente dans l'industrie par groupe principal, par industries et par produits (1971=100)	2
Groupe principal	
1. Industries des aliments et boissons	2
2. Industrie du tabac	16
3. Industrie du caoutchouc et des produits en matière plastique	16
4. Industrie du cuir	19
5. Industrie textile	21
6. Bonneterie	24
7. Industrie de l'habillement	26
8. Industrie du bois	27
9. Industrie du meuble et des articles d'ameublement	32
10. Industrie du papier et activités annexes	33
12. Première transformation des métaux	39
13. Fabrication de produits en métal (sauf machines et équipement de transport)	42
14. Fabrication de machines (sauf électriques)	44
15. Fabrication d'équipement de transport	46
16. Fabrication de produits électriques	48
17. Fabrication de produits minéraux non métalliques	52
18. Fabrication de produits du pétrole et du charbon	55
19. Industrie chimique	57
20. Industries manufacturières diverses	61
2. Indices des prix d'achat des matériaux industriels:	
Métaux secondaires (1971=100)	66
Le charbon de chauffage indice	68
3. Indices des prix de vente de l'énergie électrique (non-résidentielle) (1971=100)	69
Explication des méthodes utilisée et sources supplémentaires des prix industriels	71

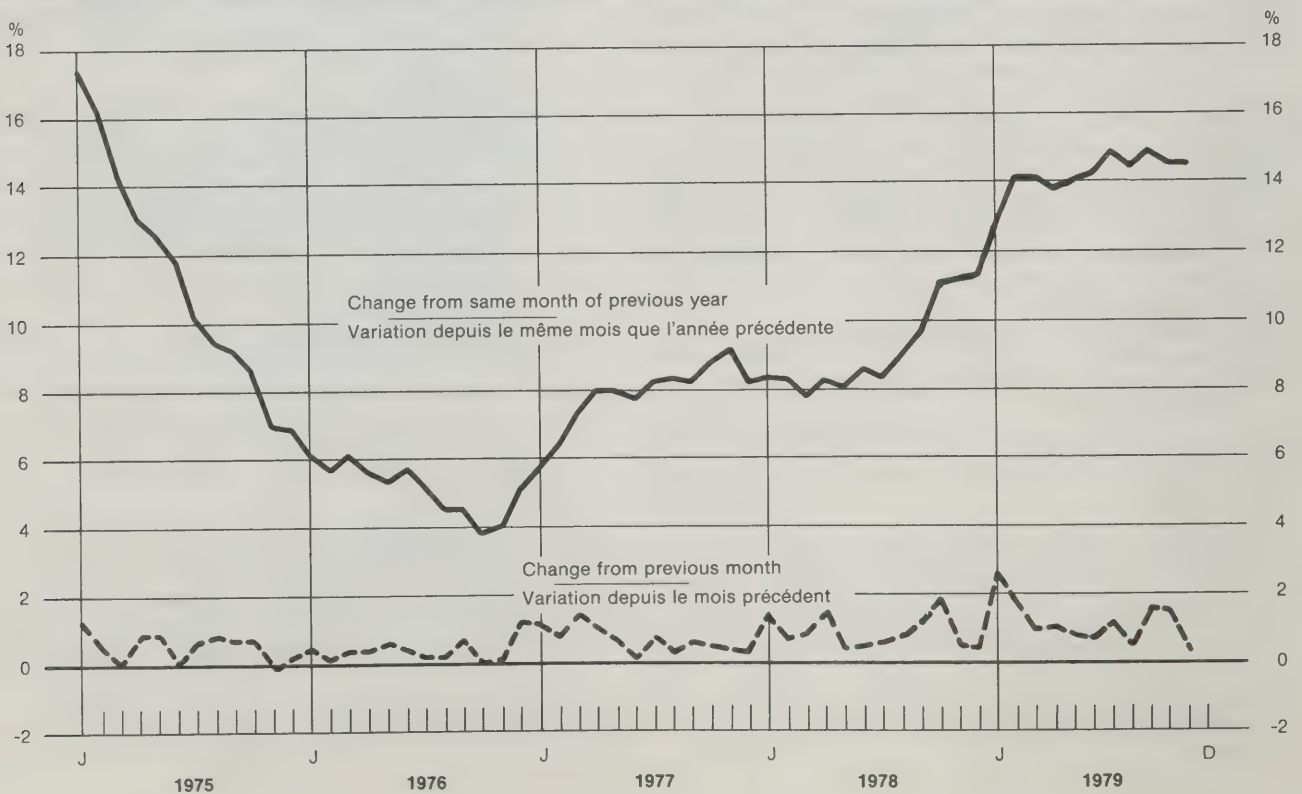

Industry Selling Price Index: Manufacturing

Indice des prix de vente dans l'industrie: industries manufacturières

Percentage Change in the Industry Selling Price Index: Manufacturing

Variation en pourcentage de l'indice des prix de vente dans l'industrie: industries manufacturières

TEXT TABLE II. Industry Selling Price Index: Manufacturing (1971=100)

TABLEAU EXPLICATIF II. Indice des prix de vente dans l'industrie: Industries manufacturières (1971=100)

	Index			Percentage change		Per cent contribution to total change		Relative importance of group 1971
	Indice			Variation proportionnelle		Contribution en pourcentage au changement total		Importance relative du groupe en 1971
	Nov. 1979(1)	Oct. 1979(1)	Nov. 1978(1)	Nov./ Oct. 1979	Nov. 1979/ 1978	Nov./ Oct. 1979	Nov. 1979/ 1978	
	Nov. 1979(1)	Oct. 1979(1)	Nov. 1978(1)	Nov./ Oct. 1979	Nov. 1979/ 1978	Nov./ Oct. 1979	Nov. 1979/ 1978	
Industry Selling Price Index: Manufacturing - Indice des prix de vente dans l'industrie: Industries manufacturières	227.4	226.7	198.6	0.3	14.5	100.0	100.0	100.0
SIC major groups - Groupes de la CAÉ:								
1. Food and beverage industries - Industries des aliments et boissons	236.4	236.1	214.2	0.1	10.4	9.3	15.3	19.9
2. Tobacco products industries - Industrie de tabac	162.2	160.7	150.1	0.9	8.1	2.6	0.5	1.1
3. Rubber and plastics products industries - Industrie du caoutchouc et des produits en matière plastique	182.4	181.1	159.7	0.7	14.2	5.2	2.0	2.5
4. Leather industries - Industrie du cuir	240.1	241.4	203.5	- 0.5	18.0	- 1.8	1.1	0.9
5. Textile industries - Industrie textile	191.2	190.7	164.5	0.3	16.2	2.7	3.3	3.5
6. Knitting mills - Bonneterie	158.2	158.3	143.6	- 0.1	10.2	- 0.1	0.5	0.9
8. Wood industries - Industrie du bois	258.9	269.7	242.4	- 4.0	6.8	- 80.1	2.7	4.7
9. Furniture and fixture industries - Industrie du meuble et des articles d'ameublement	216.8	214.8	189.6	0.9	14.3	5.0	1.5	1.6
10. Paper and allied industries - Industrie du papier et activités annexes	255.9	251.0	216.2	2.0	18.4	63.0	11.3	8.2
12. Primary metal industries - Première transformation des métaux	281.5	281.8	220.5	- 0.1	27.7	- 3.9	17.8	8.4
13. Metal fabricating industries - Fabrication des produits en métal	218.2	216.8	196.6	0.6	11.0	16.4	5.6	7.5
14. Machinery industries - Fabrication de machines	192.7	191.0	173.9	0.9	10.8	11.6	2.9	4.4
16. Electrical products industries - Fabrication de produits électriques	178.4	178.0	160.8	0.2	10.9	4.3	4.1	6.8
17. Non-metallic mineral products industries - Fabrication de produits minéraux non métalliques	213.2	212.6	194.0	0.3	9.9	3.0	2.1	3.2
19. Chemical and chemical products industries - Industrie chimique	225.8	224.2	194.3	0.7	16.2	16.4	7.2	6.6
Other major groups(2) - Autres groupes(2)	226.5	225.0	194.5	0.7	16.5	46.4	22.1	19.8
Special aggregations - Agrégations spéciales:								
Total food and beverage industries excluding alcoholic beverages - Ensemble des industries des aliments et boissons sauf les boissons alcooliques	240.2	239.9	217.7	0.1	10.3	8.7	14.2	18.2
Total non-food industries, including alcoholic beverages - Ensemble des industries non alimentaires incluant les boissons alcooliques	224.6	223.9	194.4	0.3	15.5	91.3	85.8	81.8
Basic industries, major groups 8, 10, 12, 17 - Industries de base, groupes 8, 10, 12, 17	259.7	260.2	219.9	- 0.2	18.1	- 19.8	33.9	24.5
Other non-food industries - Autres industries non alimentaires	209.6	208.4	183.6	0.6	14.2	111.1	51.9	57.3

(1) These indexes are preliminary.

(1) Ces indices sont provisoires.

(2) Included are the following major groups: 7 - Clothing industries, 15 - Transportation equipment industries, 18 - Petroleum and coal products industries, 20 - Miscellaneous manufacturing industries.

(2) Les groupes suivants sont inclus: 7 - Industrie de l'habillement, 15 - Fabrication d'équipement de transport, 18 - Fabrication de produits du pétrole et du charbon, 20 - Industries manufacturières diverses.

TEXT TABLE II. Changes in Publication of Industry Selling Price Indexes

TABLEAU EXPLICATIF II. Changements apportés à la publication des indices des prix de l'industrie

CANSIM Code	Series title	Index number	Date of change
Code CANSIM	Titre de la série	Numéro de l'indice	Date du changement
	Public:		
	Food — Aliments:		
D501848	Sausage, other than pork, not canned, Prairies — Saucisse, sauf pur porc, non en boîtes, Prairies	01 1011 028 01 04	December — 1979 — Décembre
D502748	Cattle hides	01 1011 090	July — 1979 — Juillet
	Prefabricated Bldgs. — Préfabrication du bâtiments:		
D521653	Component house packages, British-Columbia — Maisons sectionnelles, Colombie-Britannique	08 2543 001 10	October — 1979 — Octobre
	Secure — Protégés:		
	Food — Aliments:		
D500043	Beef, fresh or frozen, Manitoba — Boeuf, frais ou congelé, Manitoba	01 1011 001 04 07	November — 1979 — Novembre
D500058	Beef, fresh or frozen, Saskatchewan — Boeuf, frais ou congelé, Saskatchewan	01 1011 001 04 08	November — 1979 — Novembre
D500072	Beef, fresh or frozen, Alberta — Boeuf, frais ou congelé, Alberta	01 1011 001 04 09	November — 1979 — Novembre
	Major appliances — De gros appareils:		
D537702	Stoves and ranges less than 28 inches wide — Fourneaux et cuisinières, largeur inférieure à 28 pouces	16 3320 001	November — 1979 — Novembre
D537720	Stoves and ranges, 28 to 32 inches wide — Fourneaux et cuisinières, de 28 à 32 pouces de largeur	16 3320 002	November — 1979 — Novembre
D537795	Dryers, mechanical, electric — Sécheuses mécaniques, électriques	16 3320 038	November — 1979 — Novembre
D537815	Washing machines, domestic electric, automatic — Machine à laver, d'usage, domestique, électriques, automatique	16 3320 042	November — 1979 — Novembre
D537815	Dishwashers, electric, domestic portable or mobile — Lave vaisselles électriques d'usage, domestique, portatifs ou mobiles	16 3320 047	November — 1979 — Novembre

INDUSTRY SELLING PRICE INDEXES

INDICES DES PRIX INDUSTRIELS

TABLE 1. Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities(1)
TABLEAU 1. Indice des prix de vente dans l'industrie par groupes, industries et par certains produits(1)

1971 = 100

(1) Indexes for the most recent six months shown are subject to revision. — Les indices figurant pour les six mois les plus récents sont sujets à révision.

(2) Gross weighted, including inter-industry shipments. For explanation see page 71.— Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 71.

(3) The Industry Selling Price Index for Manufacturing contains estimates of the movements of petroleum prices for the months for which the Petroleum and Coal Products Industries index (D544000, major group 18) is not available. — L'indice des prix de vente dans l'industrie manufacturière englobe les variations estimatives des prix des produits pétroliers les mois où l'indice de la fabrication de produits du pétrole et du charbon (D544000, groupe 18) n'est pas disponible.

(4) Only British Columbia prices for both rough and planed hemlock are included. — Seuls les prix de Colombie-Britannique du pruche à l'état brut et plané sont inclus.

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971=100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction data for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes: Manufacturing, 1956-1976, Catalogue 62-543 for the 1971=100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971=100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueilli des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: Industries manufacturières, 1956-1976, n° 62-543 au catalogue pour les indices basés sur l'année repère 1971=100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix

by oil companies for finely specified categories of sale. A listing of the components of the old and revised price samples is given in text table 1.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user category in the Petroleum Refinery Index (PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P_{t/71}^{\text{Pub.}} = P_{t/\text{Jan. } 77}^{\text{New}} \times P_{\text{Jan. } 77/71}^{\text{Old}}$$

where

$P_{t/71}^{\text{Pub}}$ is the published index for a period subsequent to January 1977 which has been derived from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P_{t/\text{Jan. } 77}^{\text{New}}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P_{\text{Jan. } 77/71}^{\text{Old}}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Thermal Coal Purchase Price Index (1971=100)

This index on a 1971=100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index

nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus. Les composantes de l'ancien échantillon et de l'échantillon révisé des prix figurent dans le texte tableau 1.

Les pondérations attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$p_{t/71}^{\text{publ.}} = p_{t/\text{janv. } 77}^{\text{nouv.}} \times p_{\text{janv. } 77/71}^{\text{anc.}}$$

où

$p_{t/71}^{\text{publ.}}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation des prix mesurée à partir du nouvel échantillon;

$p_{t/\text{janv. } 77}^{\text{nouv.}}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$p_{\text{janv. } 77/71}^{\text{anc.}}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice du prix d'achat du charbon thermique (1971=100)

Cet indice de base 1971=100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat

determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, excluding federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspeyres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

\sum is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the fixed weight of a particular item in the base year o,

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index

payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, sans les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'"indice du prix d'achat du charbon thermique" est établi à l'aide de l'équation modifiée de Laspeyres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

\sum est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération fixe d'un article particulier pendant l'année de base o,

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend

is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971=100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) an index for bills less than 5 000 kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$Pt/o = \frac{\sum \frac{Pt}{Po} \times Vo}{\sum Vo} \times 100$$

Pt/o = index for year t

Pt = price of an item in the given period

Po = price of an item in year o, the base year

Vo = weight of an item in the base period

Pt/Po = price ratio for a particular item.

comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence qui doit paraître bientôt (n° 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971=100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie garantie, non susceptible d'être interrompue fait l'objet du relevé, les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité du produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$Pt/o = \frac{\sum \frac{Pt}{Po} \times Vo}{\sum Vo} \times 100$$

Pt/o = indice pour l'année "t"

Pt = prix d'un article particulier pendant une période donnée

Po = prix d'un article particulier pendant l'année "o", année de base

Vo = coefficient de pondération d'un article pendant la période de base

Pt/Po = ratio des prix pour un article particulier.

Methodology

Bills less than 5 000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5 000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW and over 20 000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5 000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15 000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Méthodologie

Factures de moins de 5 000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5 000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonnage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquête) pour chaque intervalle ou strate, par ex., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW et plus de 20 000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5 000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinemment que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15 000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distorsions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

SYMBOLS

The following standard symbols are used in Statistics Canada publications:

- .. figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed.
 - ^P preliminary figures.
 - ^r revised figures.
- x confidential to meet secrecy requirements of the Statistics Act.

NOTE

CANSIM[®] (Canadian Socio-Economic Information Management System) is Statistics Canada's computerized data bank and its supporting software. Most of the data appearing in this publication, as well as many other data series are available from CANSIM via terminal, on computer printouts, or in machine readable form. Historical and more timely data which is not included in this publication are available from CANSIM.

Table 1 (i.e., Industry Selling Price Indexes by Major Groups, Industries and Selected Commodities) includes the identification codes required to order series from CANSIM. For example, to obtain the Industry Selling Price Index: Manufacturing, the code used is D 500000.

For further information write to CANSIM Division, Statistics Canada, Ottawa, K1A 0Z8 or call (613) 995-7406.

[®] Registered Trade Mark of Statistics Canada.

Revisions

Price indexes in this publication are subject to revision for the most recent six months shown except for Electric Power Selling Price Indexes which have a four months revision period. Any revisions beyond these limits are so indicated.

SIGNES CONVENTIONNELS

Les signes conventionnels suivants sont employés uniformément dans les publications de Statistique Canada:

- .. nombre indisponibles.
- ... n'ayant pas lieu de figurer.
- néant ou zéro.
- nombres infimes
 - ^P nombres provisoires.
 - ^r nombres rectifiés.
- x confidentiels en vertu des dispositions de la Loi sur la Statistique relatives au secret.

NOTA

Le CANSIM[®] (Système canadien d'information socio-économique) est le système de Statistique Canada qui se compose d'une banque de données informatisée et de son logiciel de soutien. La plupart des données présentées dans cette publication et beaucoup d'autres données contenues dans le CANSIM peuvent être extraites par l'intermédiaire d'un terminal, sous forme d'imprimés d'ordinateur ou sous forme lisible par machine. Des données historiques et des données plus actuelles qui n'apparaissaient pas dans cette publication sont disponibles de CANSIM.

Le tableau 1 (Indice des prix de vente dans l'industrie par groupes, industries et par certains produits) contient les numéros d'identification qui servent à l'extraction des données de CANSIM. Par exemple, pour obtenir l'Indice de prix de vente dans l'industrie: industries manufacturières, le numéros d'identification est D 500000.

Pour plus de renseignements, écrivez à la Division CANSIM, Statistique Canada, Ottawa, K1A 0Z8, ou téléphonez à (613) 995-7406.

Révisions

Les indices de prix contenus dans le présente publication sont susceptibles d'être révisés pour les six derniers mois indiqués. Font exception les indices des prix de vente de l'énergie électrique qui sont sujets à révision pendant quatre mois. Toute révision portant sur une plus longue période est indiquée.

4. Leather industries - Industrie du cuir	241.7	240.7	205.3	0.4	17.7	0.4	1.0	0.9
5. Textile industries - Industrie textile	191.4	191.2	165.6	0.1	15.6	0.4	3.0	3.5
6. Knitting mills - Bonneterie	158.8	158.2	144.1	0.4	10.2	0.3	0.4	0.9
8. Wood industries - Industrie du bois	247.6	257.4	241.5	- 3.8	2.5	- 22.7	0.9	4.7
9. Furniture and fixture industries - Industrie du meuble et des articles d'ameublement	219.2	216.8	194.1	1.1	12.9	1.9	1.3	1.6
10. Paper and allied industries - Industrie du papier et activités annexes	256.4	256.3	217.3	-	18.0	0.4	10.4	8.2
12. Primary metal industries - Première transformation des métaux	289.5	282.1	221.3	2.6	30.8	30.2	18.7	8.4
13. Metal fabricating industries - Fabrication des produits en métal	220.2	219.1	197.3	0.5	11.6	4.0	5.6	7.5
14. Machinery industries - Fabrication de machines	193.4	192.4	174.4	0.5	10.9	2.1	2.8	4.4
16. Electrical products industries - Fabrication de produits électriques	179.4	178.5	161.3	0.5	11.2	2.9	4.0	6.8
17. Non-metallic mineral products industries - Fabrication de produits minéraux non métalliques	213.9	213.5	194.2	0.2	10.1	0.6	2.0	3.2
19. Chemical and chemical products industries - Industrie chimique	227.5	226.3	195.4	0.5	16.4	3.8	6.9	6.6
Other major groups(2) - Autres groupes(2)	234.2	228.5	195.1	2.5	20.0	55.0	25.3	19.8
Special aggregations - Agrégations spéciales:								
Total food and beverage industries excluding alcoholic beverages - Ensemble des industries des aliments et boissons sauf les boissons alcooliques	243.1	240.9	218.8	0.9	11.1	19.6	14.4	18.2
Total non-food industries, including alcoholic beverages - Ensemble des industries non alimentaires incluant les boissons alcooliques	227.3	225.3	195.2	0.9	16.4	80.4	85.6	81.8
Basic industries, major groups 8, 10, 12, 17 - Industries de base, groupes 8, 10, 12, 17	260.5	259.8	220.4	0.3	18.2	8.6	32.0	24.5
Other non-food industries - Autres industries non alimentaires	213.1	210.6	184.4	1.2	15.6	71.6	53.6	57.3

(1) These indexes are preliminary.

(1) Ces indices sont provisoires.

(2) Included are the following major groups: 7 — Clothing industries, 15 — Transportation equipment industries, 18 — Petroleum and coal products industries, 20 — Miscellaneous manufacturing industries.

(2) Les groupes suivants sont inclus: 7 — Industrie de l'habillement, 15 — Fabrication d'équipement de transport, 18 — Fabrication de produits du pétrole et du charbon, 20 — Industries manufacturières diverses.

TEXT TABLE II. Changes in Publication of Industry Selling Price Indexes

TABLEAU EXPLICATIF II. Changements apportés à la publication des indices des prix de l'industrie

CANSIM Code	Series title	Index number	Date of change
Code CANSIM	Titre de la série	Numéro de l'indice	Date du changement
Public:			
Food - Aliments:			
D501055	Fresh or frozen - Fancy meat (edible offal) - Abats comestibles - Frais ou congelés	01 1011 007	December - 1979 - Décembre
D502194	Other specialty sausages - Autres saucissons	01 1011 033	"
Machinery industries (except electrical) - Fabrication de machines (sauf électriques).			
D533325	Air compressors - Stationary - Reciprocating, over 25 cu. ft. - Compresseurs d'air fixes, à mouvement alternatif, plus de 25 pieds cubes	14 3150 013	"
D533388	Pumps - Centrifugal - Sump - Domestic - Pompes - d'assèchement centrifuges - Pour la maison	14 3150 017	"
D533484	Pump parts and accessories - Pièces et accessoires de pompes	14 3150 033	"
D533888	Other rock drilling earth boring and related machinery and parts - Autres appareils de sondage et machines assimilées et pièces	14 3150 106	"
D534565	Fans and blowers - Industrial - Axial - Ventilateurs et souffleurs - Industriels - Axiaux	14 3150 267	"
D534605	Power ventilators, incl. roof units - Ventilateurs mécaniques, dont appareils de toit	14 3150 272	"
D535150	Pumps - Centrifugal - Sump - Industrial - Pompes - d'assèchement - Centrifuges - Industrielles	14 3150 018	"
D535264	Fans and blowers - Industrial - Centrifugal ventilators et souffleurs - Industriels - Centrifuges	14 3150 268	"

(1) Indexes for the most recent six months shown are subject to revision. — Les indices figurant pour les six mois les plus récents sont sujets à révision.

(2) Gross weighted, including inter-industry shipments. For explanation see page 72. — Indice pondéré brut comprenant les livraisons inter-industrielles. Pour toute explication voir page 72.

(3) The Industry Selling Price Index for Manufacturing contains estimates of the movements of petroleum prices for the months for which the Petroleum and Coal Products Industries index (D544000, major group 18) is not available. — L'indice des prix de vente dans l'industrie manufacturière englobe les variations estimatives des prix des produits pétroliers les mois où l'indice de la fabrication de produits du pétrole et du charbon (D544000, groupe 18) n'est pas disponible.

(4) Only British Columbia prices for both rough and planed hemlock are included. — Seuls les prix de Colombie-Britannique du pruche à l'état brut et plané sont inclus.

EXPLANATION OF METHODS USED AND ADDITIONAL SOURCES FOR INDUSTRIAL PRICE INDEXES

Industry Selling Price Indexes (1971=100)

Industry Selling Price Indexes are published for approximately 110 industries within manufacturing. Also published are approximately 700 commodity price indexes for the products of these industries. The Classification system is that of the 1970 Standard Industrial Classification, thus permitting the joint use of price statistics with other data such as production and employment similarly classified.

The data upon which both the initial selection of commodities to be priced and responding firms are made, are contained in the Census of Manufacturers, a series of annual surveys collecting statistics on shipments of commodities, employment and materials used. Prices are collected for new orders placed on the 15th of each month or the nearest transaction data for the commodity being priced; sales and excise taxes are excluded.

The indexes are gross weighted. They measure the movements of prices of gross shipments of manufacturing industries, including inter-industry shipments between individual industries within manufacturing. Therefore, they duplicate the movements of some prices in the sense that, for example, flour prices are given full weight as part of the shipments of the Flour Mills Industry and then are implicitly counted again through full weighting of the shipment prices of those manufacturing industries which use flour as an ingredient in their outputs, e.g., bread, biscuits, cakes, etc.

The industry classified price indexes are useful for analysis of price movements, for estimation of the constant dollar value of shipments, and for purposes of contract escalations.

A complete description of these indexes is contained in: Industry Selling Price Indexes: Manufacturing, 1956-1976, Catalogue 62-543 for the 1971=100 based indexes.

Petroleum Refineries Price Index

A revised price sample has been linked into the Petroleum Refineries Price Indexes of the Industry Selling Price Indexes (Table 1), effective February 1977 wherein the number of prices observed and collected has been increased ninefold. The prices for these commodities are the average net realized prices

EXPLICATION DES MÉTHODES UTILISÉES ET SOURCES SUPPLÉMENTAIRES DES PRIX INDUSTRIELS

Indices des prix de vente dans l'industrie (1971=100)

Les indices des prix de vente dans l'industrie sont publiés pour environ 110 industries manufacturières. Près de 700 indices des prix des produits de ces industries sont également publiés. Les produits sont classés d'après la Classification des activités économiques de 1970, ce qui permet d'utiliser la statistique des prix avec d'autres données telles que la production et l'emploi classées de la même manière.

Les données sur lesquelles se fonde le choix initial des produits dont il faut déterminer le prix et des établissements enquêtés figurent dans le "recensement des manufactures", série de bulletins sur les enquêtes annuelles au cours desquelles ont recueilli des statistiques sur les expéditions de produits, l'emploi et les matières utilisées. La collecte des prix a lieu le 15 de chaque mois ou à la date de transaction la plus rapprochée pour le produit en question; les taxes de vente et droits d'accise ne sont pas pris en compte.

Il s'agit d'indices pondérés bruts. Ils mesurent les mouvements du prix des livraisons brutes des industries manufacturières, y compris les livraisons interindustrielles des industries manufacturières. Ils prennent donc deux fois en compte les mouvements de certains prix; les prix de la farine, par exemple, font l'objet d'une pondération complète comme ayant trait aux livraisons des meuneries et ils sont comptés à nouveau implicitement du fait de la pondération complète des prix de livraisons des industries manufacturières qui utilisent de la farine comme ingrédient dans leurs produits tels que le pain, les biscuits ou les gâteaux.

Les indices des prix classés par industrie servent à analyser les mouvements de prix, à estimer la valeur des expéditions en dollars constants et à indexer les contrats.

La description complète de ces indices figure dans l'industrie: Industries manufacturières, 1956-1976, n° 62-543 au catalogue pour les indices basés sur l'année repère 1971=100.

Indice des prix concernant les raffineries de pétrole

Les indices de prix concernant les raffineries de pétrole et faisant partie des indices des prix de vente dans l'industrie (tableau 1) sont fondés sur un nouvel échantillon des prix, à partir de février 1977; dès lors, le nombre de prix observés et recueillis a été multiplié par neuf. Le prix des produits du pétrole est la moyenne des prix

by oil companies for finely specified categories of sale. A listing of the components of the old and revised price samples is given in text table 1.

The weights assigned to all user categories in the new series correspond to net sales made in 1971 by the respective company in any given region. Each weight represents the importance of the respective user category in the Petroleum Refinery Index (PRI) commodity listing, and determines the degree of influence which each price change has on the total index.

The index movement derived from the new sample was linked into the historical series at January 1977 and the procedure is described algebraically below:

$$P_{t/71}^{\text{Pub.}} = P_{t/\text{Jan. } 77}^{\text{New}} \times P_{\text{Jan. } 77/71}^{\text{Old}}$$

where

$P_{t/71}^{\text{Pub}}$ is the published index for a period subsequent to January 1977 which has been derived from multiplying the January 1977 level of the old index by the price movement derived from the new price sample;

$P_{t/\text{Jan. } 77}^{\text{New}}$ is the expression for the most recent index derived from the weights and price indexes of the new sample with a reference of January 1977;

$P_{\text{Jan. } 77/71}^{\text{Old}}$ is the expression for the last published index of January 1977 wherein the old weights and price sample were utilized.

Purchase Price Indexes of Industrial Materials

Secondary Metals (1971=100)

Ferrous and non-ferrous indexes are compiled from a series of input prices, inclusive of transportation and brokerage fees, submitted by a wide variety of purchasers from selected industries. Indexes for certain categories of metals cannot be published because of the confidentiality of the data under the Statistics Act.

Thermal Coal Purchase Price Index (1971=100)

This index on a 1971=100 base is the result of a renewed demand for coal because of an anticipated shortage in energy supplies. The index for coal is a purchase price index

nets réels que les sociétés pétrolières exigent pour des catégories bien précises de produits vendus. Les composantes de l'ancien échantillon et de l'échantillon révisé des prix figurent dans le texte tableau 1.

Les pondérations "attribuées à toutes les catégories d'utilisateurs dans la nouvelle série correspondent aux ventes nettes effectuées en 1971 par la société en question dans une région donnée. Chaque pondération représente l'importance de la catégorie respective d'utilisateur figurant dans la liste des produits pétroliers pris en compte par les indices de prix et détermine l'influence que chaque changement de prix exerce sur l'indice global.

Les variations de l'indice calculées à partir du nouvel échantillon ont été raccordées à la série historique en janvier 1977; le procédé s'exprime ainsi de manière algébrique:

$$p_{t/71}^{\text{publ.}} = p_{t/\text{janv. } 77}^{\text{nouv.}} \times p_{\text{janv. } 77/71}^{\text{anc.}}$$

où

$p_{t/71}^{\text{publ.}}$ est l'indice publié pour une période ultérieure à janvier 1977, calculé en multipliant le chiffre de l'ancien indice en janvier 1977 par la variation des prix mesurée à partir du nouvel échantillon;

$p_{t/\text{janv. } 77}^{\text{nouv.}}$ est l'indice le plus récent calculé avec les pondérations et les indices de prix du nouvel échantillon en prenant janvier 1977 comme période de référence;

$p_{\text{janv. } 77/71}^{\text{anc.}}$ est le dernier indice publié de janvier 1977 faisant appel aux anciennes pondérations et à l'ancien échantillon de prix.

Indices du prix d'achat des matériaux industriels

Métaux secondaires (1971=100)

L'indice des métaux ferreux et non ferreux est établi à partir d'une série de prix comprenant les frais de transport et de dédouanement; ces données sont fournies par un large éventail de clients de certaines industries. Confidentiels en vertu de la Loi sur la Statistique, les indices de certaines catégories de métaux ne peuvent être publiés.

Indice du prix d'achat du charbon thermique (1971=100)

Cet indice de base 1971=100 a été établi à la suite d'une nouvelle demande de charbon à cause d'une pénurie prévue en ressources énergétiques. L'indice du charbon est un indice du prix d'achat

determined by surveying electric utilities, the major users of bituminous coal. It includes purchase prices for both domestic and imported United States coal. Prices are the amount the utilities pay to suppliers, excluding federal and provincial taxes and freight rates. The weights in this index are derived from the base year purchase prices provided by the firms.

The "Thermal Coal Purchase Price Index" is calculated using the modified Laspeyres' fixed weight formula:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

where

$P_{t/o}$ is the price index (expressed as a percentage) which compares prices of the given year t with those of the base year o (1971),

\sum is the sign indicating the summation over all items contained in the index,

P_t is the price of a particular item in the given period t,

P_o is the price of a particular item in the base year o,

V_o is the fixed weight of a particular item in the base year o,

$\frac{P_t}{P_o}$ is the price ratio for a particular item (expressed as a percentage) between the given period t and the base year o.

Indexes for establishment and provincial levels cannot be published because of the confidentiality of the data under the Statistics Act.

Electric Power Selling Price Indexes (Non-residential)

Brief Description

The Electric Power Selling Price Indexes are designed to measure "pure" price change at the producers' level, i.e., at the "factory gate". Since the industry's transmission lines are considered as part of the producer's operation, the "factory gate" in this index

payé par les services publics d'électricité, principaux utilisateurs de charbon bitumineux. Il comprend à la fois le prix d'achat du charbon domestique et du charbon importé des États-Unis. Les prix sont ceux payés aux fournisseurs, sans les taxes fédérales et provinciales et les taux de fret. Les coefficients de pondération sont calculés à partir du prix d'achat de l'année de base fournis par les entreprises.

L'"indice du prix d'achat du charbon thermique" est établi à l'aide de l'équation modifiée de Laspeyres à pondération fixe:

$$P_{t/o} = \frac{\sum \frac{P_t}{P_o} V_o}{\sum V_o} \times 100$$

où

$P_{t/o}$ est l'indice (exprimé en pourcentage) des prix d'une année t sur ceux de l'année de base o (1971),

\sum est le symbole qui indique la somme de tous les articles de l'indice,

P_t est le prix d'un article particulier pendant la période donnée t,

P_o est le prix d'un article particulier pendant l'année de base o,

V_o est le coefficient de pondération fixe d'un article particulier pendant l'année de base o,

$\frac{P_t}{P_o}$ est le rapport (exprimé en pourcentage) du prix d'un article particulier entre la période donnée t et l'année de base o.

Les indices aux niveaux de l'établissement et de la province ne peuvent être publiés puisque la confidentialité des données doit être assurée en vertu de la Loi sur la statistique.

Indices des prix de vente de l'énergie électrique (non résidentielle)

Brève description

Les indices des prix de vente de l'énergie électrique visent à mesurer la variation de prix "pure" au niveau de la production, c'est-à-dire, au "départ de l'usine". Étant donné que les lignes de transport de l'entreprise font ici partie de l'exploitation du producteur, le présent indice prend

is at the user's end. These indexes are part of a larger system of indexes known as the Industry Selling Price Indexes and conform to the underlying concepts as described in reference document, Catalogue 62-543.

Industry Selling Price Indexes are a measure of pure price change of specified commodities having a fixed time and weight base of 1971=100. Prices are f.o.b. factory gate less discounts and before taxes. The 1971 Gross Shipment Values are gathered by the Census of Manufacturers. In the case of Electric Power Selling Price Indexes, weights are based on the 1971 revenue from electricity sales gathered by Prices Division.

The Electric Power Selling Price Index series is published in two broad customer categories of sales, (1) an index for bills less than 5 000 kW and (2) an index for large industrial sales, bills or contracts 5 000 kW and over. Data are presented from 1971 onward, on a monthly basis. Only firm (non-interruptible) power is being surveyed. Interruptible and off-peak power price movement is not included in this index. The survey methodology is described under each of the two broad customer categories.

Whenever specification changes occur thereby altering the quality of the item being priced, quality change evaluations are made to ascertain only pure price change since the commodity characteristics must remain constant in order to measure pure price change over a given period of time, using Laspeyres formula as follows:

$$P_t/P_o = \frac{\sum \frac{P_t}{P_o} \times V_o}{\sum V_o} \times 100$$

P_t/P_o = index for year t

P_t = price of an item in the given period

P_o = price of an item in year o, the base year

V_o = weight of an item in the base period

P_t/P_o = price ratio for a particular item.

comme point de "départ de l'usine" l'entrée chez l'utilisateur. Ces indices appartiennent à un plus grand système d'indices appelé Indices de prix de vente dans l'industrie et s'appuient sur les concepts décrits dans le document de référence qui doit paraître bientôt (n° 62-543 au catalogue).

Les indices de prix de vente dans l'industrie mesurent la variation de prix pure de certains produits ayant une base fixe de période et de pondération (1971=100). Il s'agit des prix f.o.b. départ usine moins les remises et avant impôt. Les valeurs des livraisons brutes sont recueillies par le recensement des manufactures. Dans le cas de l'indice des prix de vente de l'énergie électrique, les pondérations sont basées sur les recettes au titre des ventes de 1971, dont les données ont été recueillies par la Division des prix.

L'indice des prix de vente de l'énergie électrique paraît pour deux grandes catégories de ventes selon le client, à savoir: (1) un indice pour les factures de moins de 5 000 kW et (2) un indice pour les ventes, factures ou contrats industriels de 5 000 kW et plus. Nous publions ces données chaque mois depuis 1971. Seule l'énergie garantie, non susceptible d'être interrompue fait l'objet du relevé, les mouvements de prix de l'énergie susceptible d'être interrompue et de l'énergie des heures creuses n'étant pas compris dans l'indice. Les méthodes d'enquête figurent sous chacune des deux grandes catégories.

Toutes les fois qu'il se produit une variation de la qualité du produit relevé, on procède à une évaluation de la variation de la qualité afin de s'assurer que seule la variation de prix pure est prise en compte, puisque les caractéristiques du produit doivent demeurer constantes si l'on veut mesurer une variation de prix pure sur une période donnée. On se sert de Laspeyres de la façon suivante:

$$P_t/P_o = \frac{\sum \frac{P_t}{P_o} \times V_o}{\sum V_o} \times 100$$

P_t/P_o = indice pour l'année "t"

P_t = prix d'un article particulier pendant une période donnée

P_o = prix d'un article particulier pendant l'année "o", année de base

V_o = coefficient de pondération d'un article pendant la période de base

P_t/P_o = ratio des prix pour un article particulier.

Methodology

Bills less than 5 000 kW. In this category a "representative bill" was selected subjectively through examination of the bills in each of the municipalities drawn in our provincial samples. Some 120 municipalities were surveyed in the sample and the municipalities selected represent a good coverage of each province in terms of sales. The representative bill was established and its kW demand and kW.h consumption specifications will be held constant until it is found, on periodic review, that the bill is no longer representative of the monthly bills in that municipality. When this occurs a new representative bill will be selected and its price "spliced in" to the original bill to maintain the continuity of the index. Larger municipalities may have more than one representative bill where several significant groupings of bills have been identified. All provinces are included in the survey.

Bills 5 000 kW and over. This customer category presented problems in sampling. The category is composed of customers whose contract prices do not necessarily move as a family of curves. In many cases larger contracts are given a different price adjustment by utilities, than the lesser ones. In order to eliminate this sampling problem, a stratified sampling technique was used whereby homogeneous groups or strata were established and a representative contract was selected subjectively for each interval or stratum, e.g., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW and over 20 000 kW (the specifications used may be theoretical in order to respect the confidentiality of a respondent). Interval boundaries and their representative contracts are held constant through time for each utility. These interval boundaries differ between utilities since each one has a different customer category make-up. The actual index of the "5 000 kW and over" category is a weighted average of the price movements for each interval or stratum within that group. Each interval is weighted according to the utility's revenue from sales for 1971. It is recognized that in the larger utilities the establishment of homogeneous groups of contracts in terms of price movement, especially in the contracts 15 000 kW and over, may not be possible. Consequently, as an alternative, utilities may calculate a weighted average unit price in each of the intervals of strata that are not homogeneous and apply this price movement to a theoretical representative contract. In this way distortions will be minimized and at the total index levels will be averaged out.

Méthodologie

Factures de moins de 5 000 kW. Dans cette catégorie une "facture représentative" a été choisie subjectivement parmi les factures de chacune des municipalités tirées de nos échantillons provinciaux. Les quelque 120 municipalités de l'échantillon sont représentatives des ventes effectuées dans chaque province. À la facture choisie sont attribuées des caractéristiques, c'est-à-dire la demande en kW et la consommation en kW.h, que l'on conserve jusqu'à ce que, après un examen périodique, on estime que la facture ne représente plus le prix mensuel des factures de cette municipalité. Dans ce cas, une nouvelle facture représentative est choisie et son prix est "ajusté" d'après la facture originale pour ne pas créer une discontinuité dans la série. Les grandes municipalités peuvent avoir plus d'une facture représentative lorsque plusieurs groupements de factures ont été établis. Toutes les provinces sont visées par l'enquête.

Factures de 5 000 kW et plus. Cette catégorie de clients présente certains problèmes d'échantillonnage; elle se compose dans son ensemble de clients pour lesquels les mouvements des prix des contrats ne vont pas nécessairement dans le même sens. Dans de nombreux cas, les gros contrats font l'objet d'un rajustement de prix par service, différent de celui des petits contrats. Afin d'éliminer ce problème, on a utilisé une technique d'échantillonnage stratifié pour établir des groupes ou strates homogènes et choisir subjectivement un contrat représentatif (dont les caractéristiques peuvent être "théoriques" de façon à garder secrets les chiffres d'un enquête) pour chaque intervalle ou strate, par ex., 5 000-8 000 kW, 8 001-10 000 kW, 10 001-15 000 kW, 15 001-20 000 kW et plus de 20 000 kW. Ces limites et leurs contrats représentatifs sont tenus constants dans le temps pour chaque service public. Ces limites ne sont pas les mêmes pour chaque service puisque chacun regroupe des clients différents. L'indice réel pour les factures de 5 000 kW et plus est une moyenne pondérée des mouvements de prix pour chaque intervalle ou strate de chaque groupe, chaque intervalle étant pondéré selon les recettes de ce service au titre des ventes de 1971. On sait pertinemment que pour les grands services, l'établissement de groupes de contrats homogènes en termes de mouvement de prix, surtout les contrats de 15 000 kW et plus, peut être impossible; par conséquent, comme solution de rechange, les services peuvent calculer un prix unitaire moyen pondéré pour chaque intervalle ou strate non homogène et appliquer cette variation de prix à un contrat représentatif théorique. De la sorte, les distortions seront maintenues à un minimum et s'équilibreront aux niveaux de l'indice total.

Individual indexes are calculated for the province, economic region and at the national level for each of the two broad customer categories described above. The five economic regions are as follows: Pacific (British Columbia), Prairie (Alberta, Saskatchewan and Manitoba), Ontario, Québec and Atlantic (Newfoundland, New Brunswick, Prince Edward Island and Nova Scotia).

Users are cautioned that the indexes indicate only price movement variations and should not be interpreted as representative of individual utilities relative price levels.

Raw Materials Price Index (1977=100)

The Raw Materials Price Index is a base-weighted series covering the domestic disappearance of some 70 commodities originating in Canada or overseas. Price data, for the most part relating to unprocessed materials, are obtained from a variety of sources including existing Statistics Canada price indexes, other government departments, and trade publications as well as respondents. Where data does not exist for an unprocessed material a price is selected from the next highest stage of processing.

The weighting system is based on values calculated for the 1974 input/output tables, i.e., gross output plus imports, wholesale and transport margins minus exports. The 1974 values were subsequently adjusted for price change between that year and 1977 using appropriate series from the General Wholesale Price Index. Where individual quotations are used these are given equal weighting within a commodity series. Weights for the major groups are given below.

The formula used in the calculations is:

$$P_s = \frac{\sum_p \frac{p_t}{77}}{n} \times 100$$

$$P_m = \frac{\sum P_s \times V}{\sum V}$$

$$P_r = \frac{\sum P_m \times V}{\sum V}$$

where

p_t = current price of raw material

77 = 1977 annual average price of raw material

P_s = commodity index

Chaque indice est calculé selon la province, la région économique et le Canada pour chacune des deux grandes catégories de clients décrites ci-haut. Les cinq régions économiques sont: le Pacifique (Colombie-Britannique), les Prairies (Alberta, Saskatchewan et Manitoba), l'Ontario, le Québec, l'Atlantique (Terre-Neuve, Nouveau-Brunswick, Île-du-Prince-Édouard et Nouvelle-Écosse).

Les utilisateurs sont priés de noter que les indices rendent compte des variations des mouvements des prix seulement et qu'il ne faut pas les considérer comme représentatif des niveaux relatifs des prix des divers services.

Indice des prix des matières brutes (1977=100)

L'indice des prix des matières brutes est un indice à pondération de base concernant la consommation intérieure de quelque 70 produits provenant du Canada ou de l'étranger. Les données sur les prix, la plupart se rapportant aux matières non transformées, ont été puisées dans diverses sources, notamment les indices de prix de Statistique Canada, les publications des ministères, les revues spécialisées et les enquêtes. Lorsqu'il n'existe aucune donnée sur une matière non transformée, le prix est établi à l'étape suivante de la transformation.

Le schéma de pondération est déterminé par les valeurs calculées dans les tableaux d'entrées-sorties de 1974, c'est-à-dire la production brute plus les importations, les marges des grossistes et celles des transporteurs, moins les exportations. Les valeurs de 1974 ont ensuite été corrigées pour tenir compte des variations de prix survenues entre 1974 et 1977, au moyen des séries appropriées de l'indice général des prix de gros. Chacun des prix particuliers pour un même produit reçoit une pondération égale. La pondération des groupes est donnée ci-après.

Voici la formule qui a servi aux calculs:

$$P_s = \frac{\sum_p \frac{p_t}{77}}{n} \times 100$$

$$P_m = \frac{\sum P_s \times V}{\sum V}$$

$$P_r = \frac{\sum P_m \times V}{\sum V}$$

où

p_t = le prix courant de la matière brute

77 = le prix moyen de la matière brute en 1977

P_s = l'indice du produit

P_m = major group index

P_r = Raw Materials Price Index

V = Input/Output values in 1974 x $\frac{1977}{1974}$ GWI.

All important crude materials consumed in Canada are covered by this index without duplication. In some instances prices are volatile (non-ferrous metals) but others are controlled by marketing boards (milk), regulation (crude oil) or long-term contracts. At the total level the index should be an early indicator of price pressure of unprocessed goods flowing into Canadian manufacturing and distribution industries.

The following indexes are published monthly:

P_m = l'indice du groupe

P_r = indice des prix des matières brutes

V = valeurs des tableaux d'entrées-sorties de 1974 x IGPG $\frac{1977}{1974}$.

Cet indice prend en compte toutes les matières brutes importantes consommées au Canada, en évitant les doubles emplois. Certains prix fluctuent énormément (métaux non ferreux), alors que d'autres sont fixés par des offices de commercialisation (lait), des règlements (pétrole brut) ou des contrats à long terme. L'indice d'ensemble devrait être un indicateur avancé de l'évolution des prix des biens non transformés qu'utilisent les entreprises de fabrication et de distribution au Canada.

Voici les indices publiés chaque mois:

Total major groups	Weights 100%	Commodities within each group
Ensemble des groupes	Pondé- ration 100 %	Produits dans chaque groupe
Vegetable materials — Sub- stances végétales	16	Fresh fruit, wheat, grains, seeds, rubber, cocoa, coffee, tea, fresh vegetables, tobacco, hay — Fruits frais, blé, autres céréales, oléagineux, caoutchouc, cacao, café, thé, légumes frais, tabac, foin
Animal materials — Substances animales	21	Furs, hides and skins, cattle and calves, sheep and lambs, hogs, poultry, milk, eggs, fish — Fourrures, cuirs et peaux, veaux et bovins, moutons et agneaux, porcs, volaille, lait, oeufs, poisson
Textile materials — Matières textiles	1	Cotton, wool, man-made fibre — Coton, laine, fibres synthétiques
Wood materials — Bois	11	Logs, pulpwood — Billes, bois à pâte
Ferrous materials — Matières ferreuses	3	Scrap, iron ore, pig iron, alloys — Ferraille, minerai de fer, fonte, alliages
Non-ferrous materials — Ma- tières non ferreuses	6	Aluminum, copper, lead, nickel, gold, precious metals, tin, zinc, scrap, other — Aluminium, cuivre, plomb, nickel, or, métaux précieux, étain, zinc, déchets, autres
Non-metallic mineral mate- rials — Minéraux non métal- liques	3	Sulphur, sand and gravel, asbestos, stone, gypsum, potash — Soufre, sable et gravier, amiante, pierre, gypse, potasse
Fuels — Combustibles	40	Thermal coal, crude oil, natural gas — Charbon thermique, pétrole brut, gaz naturel

Users who wish to comment on the indexes presented here are invited to contact the Goods and Service Producing Industries Prices Section, Prices Division, telephone (613) 995-5761.

Les utilisateurs qui auraient des observations à faire au sujet de cet indice sont priés d'en faire part à la Section des prix des industries de biens et de services, Division des prix, téléphone (613) 995-5761.
